Dearborn, MI | 313-367-8506 | yogeshvenkat21@gmail.com | [linkedin.com/in/yogeshvenkat21](https://www.linkedin.com/in/yogeshvenkat21) | github.com/Yogesh21v | yogesh21v.github.io

Summary

Software Engineer with strong object-oriented programming fundamentals (Java, Spring Boot, Hibernate, JDBC) and hands-on experience shipping production REST APIs and database-backed systems (Node.js/Express, MySQL, MongoDB). Designed and shipped a multi-tenant billing and finance platform end-to-end, from schema to production deployment, and delivered AWS serverless solutions (Lambda, DynamoDB, Rekognition). Looking to bring full-stack, backend, and cloud engineering skills to a Java-based development role.

Experience

NowforceAI

Jul 2026 – Present

Junior Software Engineer

Aubrey, TX (Remote)

- Designed and built a full-stack, multi-tenant billing and finance module (parties, items, sales, purchases, cash & bank, salary tracking, financial reporting) for a production applicant-tracking system, using Node.js/Express and MySQL on the backend and JavaScript on the frontend.
- Diagnosed and resolved database compatibility issues in production API routes as the module scaled, including a defect where UPDATE statements were silently failing, restoring reliable edit functionality across the billing system.
- Architected an evolving salary and resource-tracking system to manage incoming client payments and outgoing consultant payouts, including per-resource expense tracking and financial reports (P&L, day-book, party statements).
- Owned the feature end-to-end – database schema, REST API design, frontend UI, and production deployment – iterating on business requirements and shipping updates through a backup-and-verify release process.

Imagine Marketing Services Pvt. Ltd. (boAt)

Jan 2024 – May 2024

R&D Intern

Bangalore, India

- Built a Python-based framework and Flask web dashboard to estimate device battery health from real-time telemetry, integrating the interface with embedded hardware for live data acquisition.
- Implemented an ML-based classification pipeline to categorize battery health status, supporting proactive diagnostics and reducing manual analysis effort.

Projects

ShaktiConnect | Full-Stack Community Web Platform

May 2026 – Aug 2026

Node.js, Express.js, MongoDB, Mongoose, JWT, REST APIs, Playwright · github.com/Yogesh21v/shakti-platform

- Built a full-stack web platform from scratch with a custom REST API (Node.js/Express), MongoDB database, and JWT-based authentication, powering a community forum, member directory, and resource-center.
- Implemented live voting, threaded replies, search/filtering, and secure user sessions, then validated all workflows through automated end-to-end testing (Playwright) before deployment.
- Designed a cost-efficient architecture using a self-provisioning database and free-tier deployment path, prioritizing scalability without added infrastructure cost.

Soccer Concierge Chatbot | AWS Serverless

Sep 2025 – Dec 2025

AWS Lambda, API Gateway, DynamoDB, SNS/SQS, CloudWatch · github.com/Yogesh21v/goalpost-chatbot

- Architected a serverless conversational chatbot on AWS Lambda and API Gateway, delivering real-time soccer scores, fixtures, and standings through natural-language queries.
- Engineered intent-based routing, entity normalization, and fallback handling to reliably parse queries and integrate third-party REST APIs for live sports data.
- Persisted conversation history in DynamoDB and decoupled processing via SNS/SQS, with CloudWatch monitoring across the pipeline.

SmartDoor | Face Recognition Access System

Sep 2025 – Dec 2025

AWS Rekognition, Kinesis Video Streams, Lambda, DynamoDB, IAM, SNS · github.com/Yogesh21v/smartdoor

- Designed a serverless, camera-based access-control system using AWS Rekognition and Kinesis Video Streams to detect and identify visitors in real time.
- Built OTP-based, time-limited authentication workflows with Lambda and DynamoDB TTL records, triggering SNS notifications on access attempts.
- Enforced least-privilege IAM roles across all APIs and services, hardening the system for production-grade access control.

News Article Retrieval Engine | Bayesian Network

Jan 2025 – Apr 2025

Python, Bayesian Inference, Information Retrieval, NLP · github.com/Yogesh21v/news-retrieval-system

- Built a probabilistic retrieval engine using a Bayesian Network model to surface relevant articles from a 210k+ HuffPost headline corpus.
- Designed the query-processing, inference, and ranking pipeline in Python for accurate, context-aware document retrieval.
- Benchmarked effectiveness using precision, recall, and Mean Average Precision (MAP), iterating to improve relevance ranking.

Education

University of Michigan, Dearborn

Sep 2024 – May 2026

M.S. in Computer and Information Science, GPA: 3.94/4.0

Dearborn, MI

Relevant Coursework: Computer Networks, Advanced Operating Systems, Cloud Computing

Sri Venkateswara College of Engineering, Anna University

Aug 2020 – May 2024

B.E. in Electronics and Communication, GPA: 8.23/10

Chennai, India

Relevant Coursework: Object-Oriented Programming, Data Structures

Technical Skills

Languages: Java, Python, JavaScript, C++, SQL

Frameworks & Libraries: Spring Boot, Spring Framework, Hibernate, JDBC, Servlets/JSP, Node.js, Express.js, React.js, REST APIs, Microservices

Databases: MongoDB, MySQL, DynamoDB

Cloud & DevOps: AWS (EC2, S3, Lambda, API Gateway, DynamoDB, IAM, SNS/SQS, CloudWatch), Docker, Kubernetes, Terraform, Jenkins, Linux

Tools & Testing: Git, JUnit, Playwright, Maven/Gradle, Postman

Core CS: Data Structures & Algorithms, Object-Oriented Design, System Design
