SUMMARY

Software engineer delivering full-stack and cloud applications, with enterprise-platform depth in ServiceNow (ITSM, CMDB, GRC, HRSD) and, more recently, Workday reporting. Delivered 3 products across staffing and healthcare, secured with role-based access models of 5 and 6 roles.

8	3	2	3.94
builds across web, cloud and ML	products live or in beta	enterprise platforms: ServiceNow, Workday	GPA in M.S. (out of 4.0)

EXPERIENCE

Junior Software Engineer Intern, NowforceAI

JUL 2026 – PRESENT

Aubrey, TX (Remote)

HireYT, AI-native applicant-tracking platform for US staffing agencies · hireyt.com

Built for a US staffing industry with $159B in annual sales (ASA, 2022), where agencies often run on spreadsheets and disconnected tools.

Node.js, Express, MySQL, JavaScript, Stripe, Playwright | ServiceNow ITSM, CMDB, GRC, HRSD

APPLICATION DEVELOPMENT

- Assigned to deliver the core platform: a multi-tenant SaaS spanning candidates, jobs, submittals, interviews, offers, placements, timesheets and billing for 5 user roles.
- Responsible for the Node.js and Express backend on MySQL, REST APIs, Stripe subscriptions, a plain JavaScript front end and a finance module with 3 reports (P&L, day-book, party statements).
- Delivered a candidate portal with resume parsing, skills-based job matching, a profile-completeness prompt, a topic-filtered community feed and messaging.
- Added AI candidate insights and an assistant, plus recruiter tools: placed-candidate badge and filter, candidate ID card and a Home dashboard with charts.
- Released through a dev/prod split with Playwright browser tests that found and fixed defects (blank tabs, PDF parsing failures, missing menu links).

SERVICENOW

- Defined the ServiceNow operating model for HireYT: ITSM incident, problem and change management with SLAs, assignment, escalation, and portal and email intake.
- Delivered agent tooling for support teams: filters, saved views, dashboards and reports.
- Modeled servers, database, integrations and customer tenants in the CMDB; configured GRC controls for candidate personal data and visa records.
- Automated onboarding and approvals in HRSD with Flow Designer; defined roles and ACLs that mirror HireYT's 5-role access model.
- Integrated through REST APIs, loaded data with import sets and transform maps, and promoted changes from dev to test to prod with update sets.

Healthcare Billing Intelligence Platform

Industry research shows about 9% of claims are initially denied and up to 65% of denials are never reworked, putting up to 3.3% of net patient revenue at risk (Change Healthcare, HFMA); for a clinic with $2M in revenue, an estimated $60K to $80K a year.

React, TypeScript, Node.js, Express, PostgreSQL, AWS (ECS Fargate, RDS, SES, SNS, Secrets Manager), Playwright

- Assigned to build a revenue-recovery tool showing every dollar owed, the next step and filing-deadline warnings, after reviewing the claim lifecycle (remittances, denial codes) with the billing team.
- Prototyped the screens, then designed a ~60-table PostgreSQL data model, a Node/Express API and a React/TypeScript front end.
- Built file intake for 4 formats (CSV, Excel, PDF, EDI) that reads, matches and imports claims, payments and denials, with sample files and undo/delete for imports.
- Delivered 7 core modules (command center, work lists, denial intelligence, filing-deadline tracking, A/R, payments, bank deposits) with 6 roles that each see only what their job needs.
- Secured with authenticator-app sign-in, password reset by email, an audit trail, hidden patient names and email confirmation for new applicants.
- Validated with about 500 automated checks, browser tests, a 110-screen sweep and phone audits at 3 screen widths; resolved team-reported issues (confusing uploads, unexpected sign-outs, a cramped file view) after reproducing each.
- Deployed on AWS with an HTTPS load balancer, private RDS database, SES/SNS email and Secrets Manager, using zero-downtime releases and one-off database migrations.

Yogesh Venkataramanan

Software Engineer | Application Development | ServiceNow | Workday

EARLIER EXPERIENCE

R&D Intern, Imagine Marketing Services Pvt. Ltd. (boAt)

JAN 2024 – MAY 2024

Bangalore, India · Python, Flask, ML classification, embedded hardware

- Assigned to build a Python and Flask dashboard that estimates device battery health from real-time telemetry on embedded hardware.
- Implemented an ML classifier that labels battery health status, reducing manual analysis.

PROJECTS

HandCarry, Crowd-Shipping Platform (Web + Android)

IN DEVELOPMENT

React, Vite, Node.js, MySQL, Capacitor, Docker, GitHub Actions · live beta

- Crowd-shipping marketplace on a 25-table MySQL schema, with a 5-step send wizard, live price quotes and customs screening.
- Ported the backend from PostgreSQL to MySQL with a query-translation layer; secured with rotating JWTs, TOTP two-factor and AES-256-GCM encrypted KYC documents; signed Android build backed by 12 API tests and Playwright.

ShaktiConnect, Full-Stack Community Platform

MAY 2026 – AUG 2026

Node.js, Express.js, MongoDB, JWT, Playwright · github.com/Yogesh21v/shakti-platform

- Delivered 3 modules (forum, member directory, resource center) on a custom REST API with JWT authentication, validated end to end with Playwright before a free-tier deployment.

Soccer Concierge Chatbot, AWS Serverless

SEP 2025 – DEC 2025

AWS Lambda, API Gateway, DynamoDB, SNS/SQS, CloudWatch · github.com/Yogesh21v/goalpost-chatbot

- Serverless chatbot answering 3 query types (scores, fixtures, standings) with intent routing and fallbacks; conversations stored in DynamoDB and work decoupled through SNS/SQS.

SmartDoor, Face Recognition Access System

SEP 2025 – DEC 2025

AWS Rekognition, Kinesis Video Streams, Lambda, DynamoDB, IAM, SNS · github.com/Yogesh21v/smartdoor

- Real-time visitor identification across 6 AWS services, with time-limited OTPs that expire through DynamoDB TTL under least-privilege IAM roles.

News Article Retrieval Engine, Bayesian Network

JAN 2025 – APR 2025

Python, Bayesian Inference, Information Retrieval, NLP · github.com/Yogesh21v/news-retrieval-system

- Query, inference and ranking pipeline on a Bayesian Network, benchmarked on 3 metrics (precision, recall, MAP).

SKILLS

Enterprise Platforms	ServiceNow (ITSM, CMDB, GRC, HRSD, Flow Designer, Roles and ACLs, Reports and Dashboards, Integrations, Import Sets, Update Sets); Workday (Reporting, recent)
Languages and Data	Java, Python, JavaScript, TypeScript, C++, SQL; MySQL, PostgreSQL, MongoDB, DynamoDB; data structures, algorithms and system design
Frameworks	Node.js, Express.js, React.js, Vite, Capacitor, Spring Boot, Hibernate, JDBC, Servlets/JSP, REST APIs, Microservices
AWS	ECS Fargate, ECR, EC2, S3, Lambda, API Gateway, DynamoDB, RDS PostgreSQL, VPC and security groups, Application Load Balancer, ACM, IAM, Secrets Manager, Systems Manager Parameter Store, SES, SNS/SQS, CloudWatch Logs, Rekognition, Kinesis Video Streams, Budgets and Cost Explorer
DevOps, Tools and AI	Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Git, JUnit, Playwright, Maven/Gradle, Postman, Stripe; LLM-powered features and AI pair-programming with Claude

EDUCATION

M.S. Computer and Information Science
University of Michigan, Dearborn
Sep 2024 – May 2026 | GPA 3.94 / 4.0

B.E. Electronics and Communication
Sri Venkateswara College of Engineering, Anna University
Aug 2020 – May 2024 | GPA 8.23 / 10

CERTIFICATIONS

The Joy of Computing using Python
NPTEL | Jan – Apr 2023

Programming in Java
NPTEL | Jul – Dec 2023
